

Publishing an App on Playstore

What is our GOAL for this MODULE?

We added touches to our game and generated apk files.

What did we ACHIEVE in the class TODAY?

- Adjusted the game dimension to fit all screen sizes.
- Made the game touch friendly for smartphones.
- Built a web wrapper around the game to generate an APK file.

Which CONCEPTS/ CODING BLOCKS did we cover today?

- Dimensions
- Touches for smartphones
- Generating Apk files

How did we DO the activities?

1. Adjust the game dimensions to fit all the screen sizes. Adjust the width and height of sprites according to the screen size.

```
38 }
39
40 function setup() {
41   createCanvas(windowWidth, windowHeight);
42
43   sun = createSprite(width-50,100,10,10);
44   sun.addAnimation("sun", sunAnimation);
45   sun.scale = 0.1
46
47   trex = createSprite(50,height-70,20,50);
48
49
50   trex.addAnimation("running", trex_running);
51   trex.addAnimation("collided", trex_collided);
52   trex.setCollider('circle',0,0,350)
53   trex.scale = 0.08
54   // trex.debug=true
55
56   invisibleGround = createSprite(width/2,height-10,width,125);
57
58   invisibleGras.shapeColor = "#f4cbaa";
```

2. Check if there is a touch or a tap as the phone doesn't have a space key to jump the trex.

```

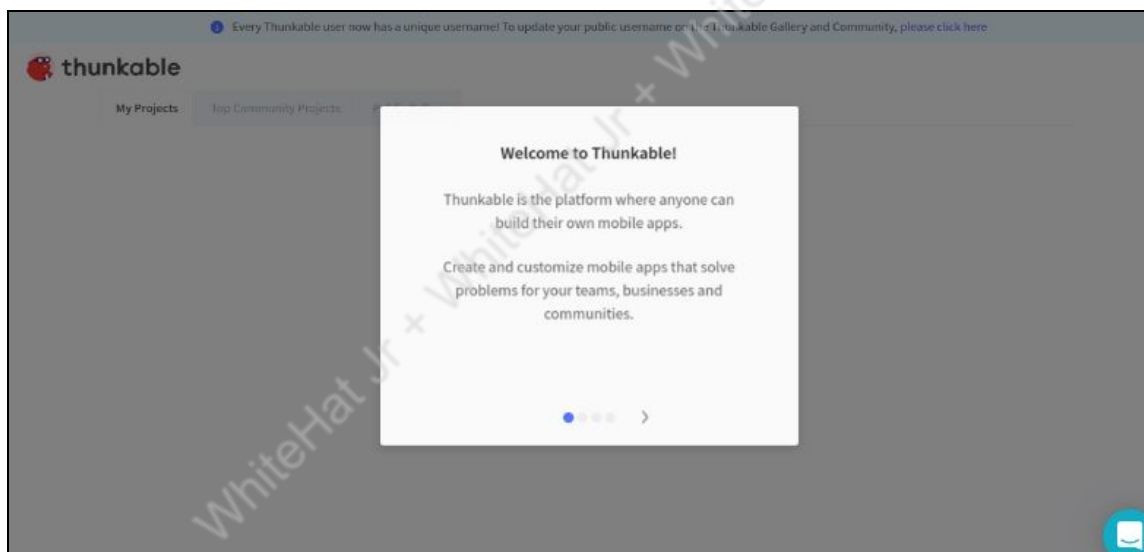

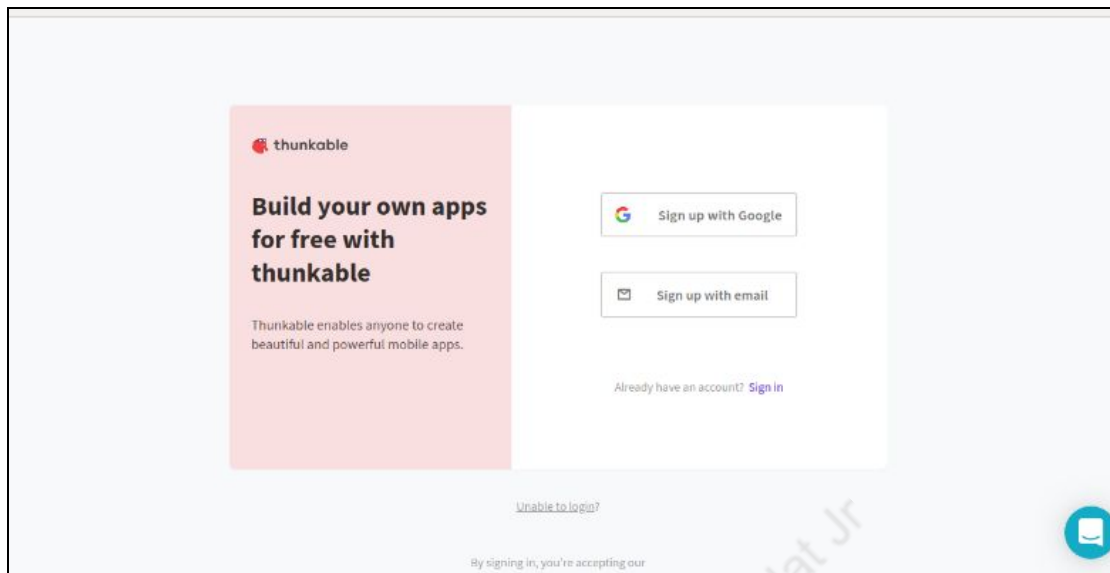

92
93▼  if (gameState===PLAY){
94      score = score + Math.round(getFrameRate()/60);
95      ground.velocityX = -(6 + 3*score/100);
96
97▼  if((touches.length > 0 || keyDown("SPACE")) && trex.y >=
height-120) {
98      jumpSound.play( )
99      trex.velocityY = -10;
100      touches = [];
101  }
102
103      trex.velocityY = trex.velocityY + 0.8
104
105▼  if (ground.x < 0){
106      ground.x = ground.width/2;
107  }
108
109      trex.collide(invisibleGround);
110      spawnClouds();
111      spawnObstacles();
112

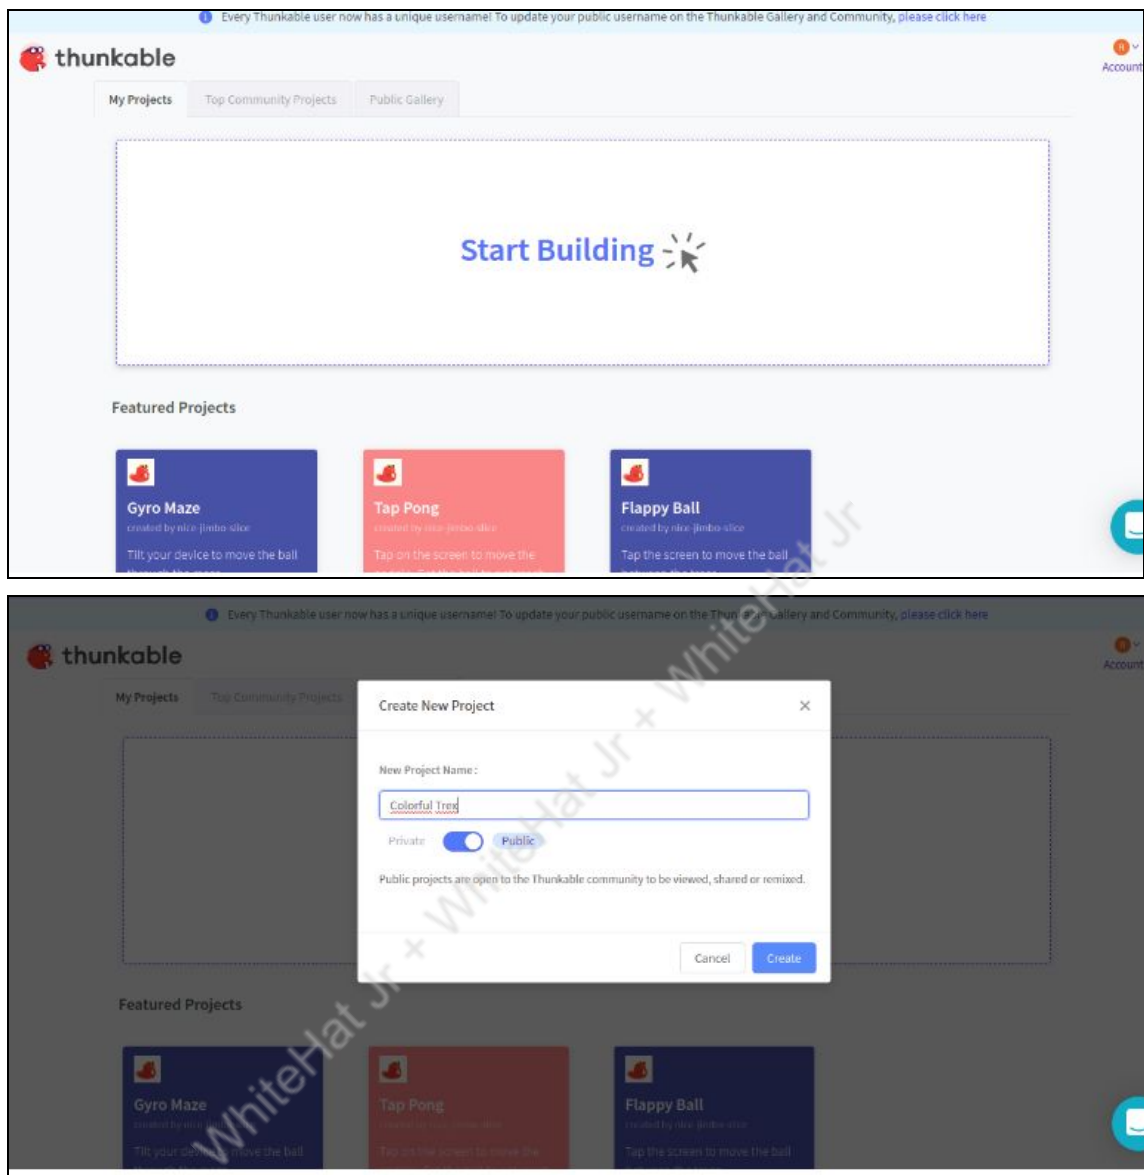

```

3. Make the game suitable for all screen sizes.

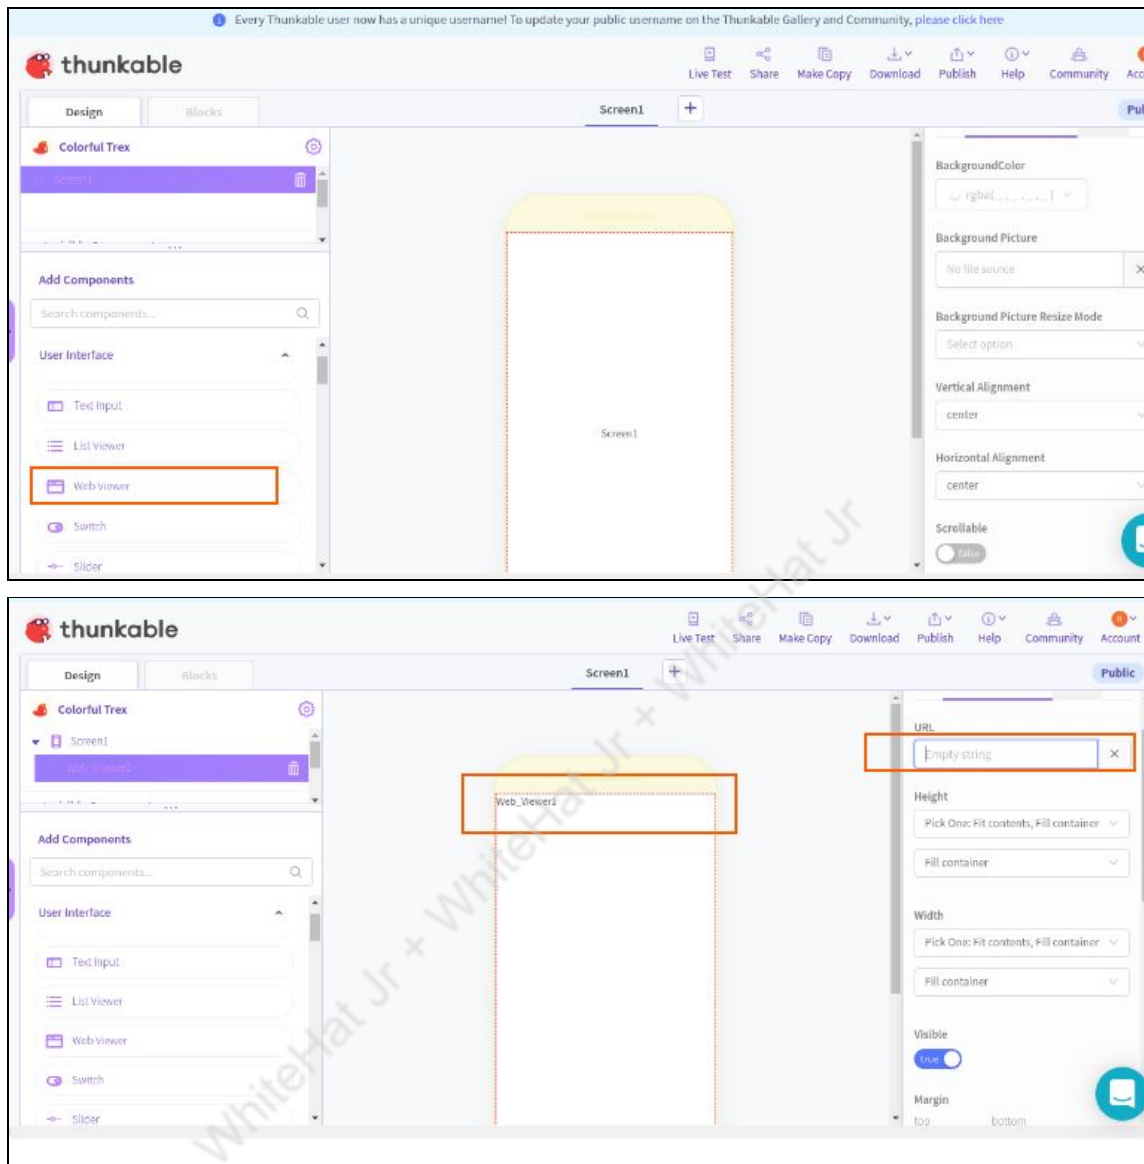

4. Publish the game using thunkable.

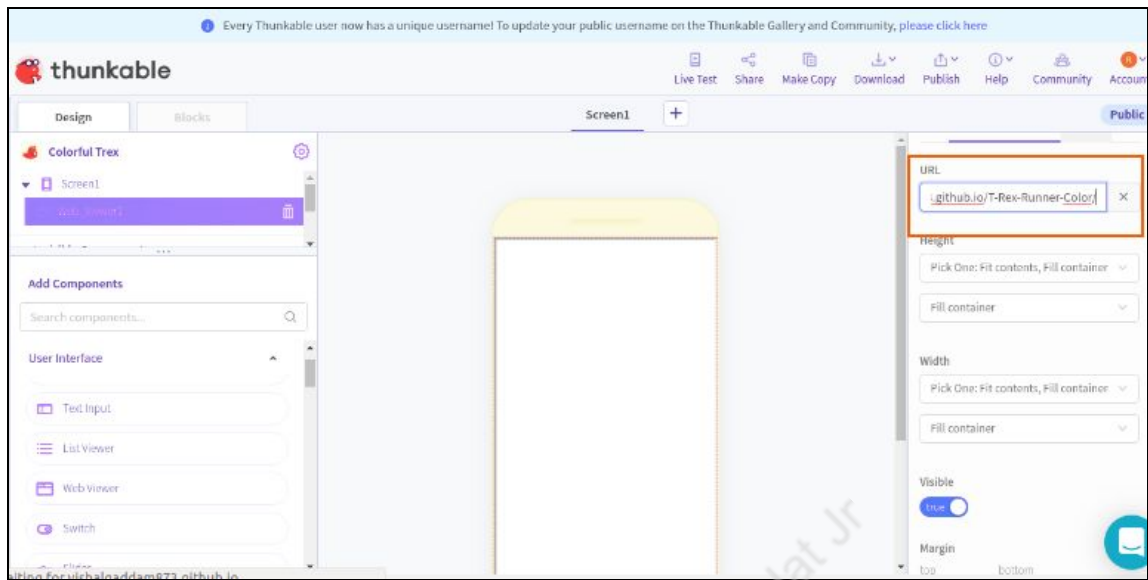

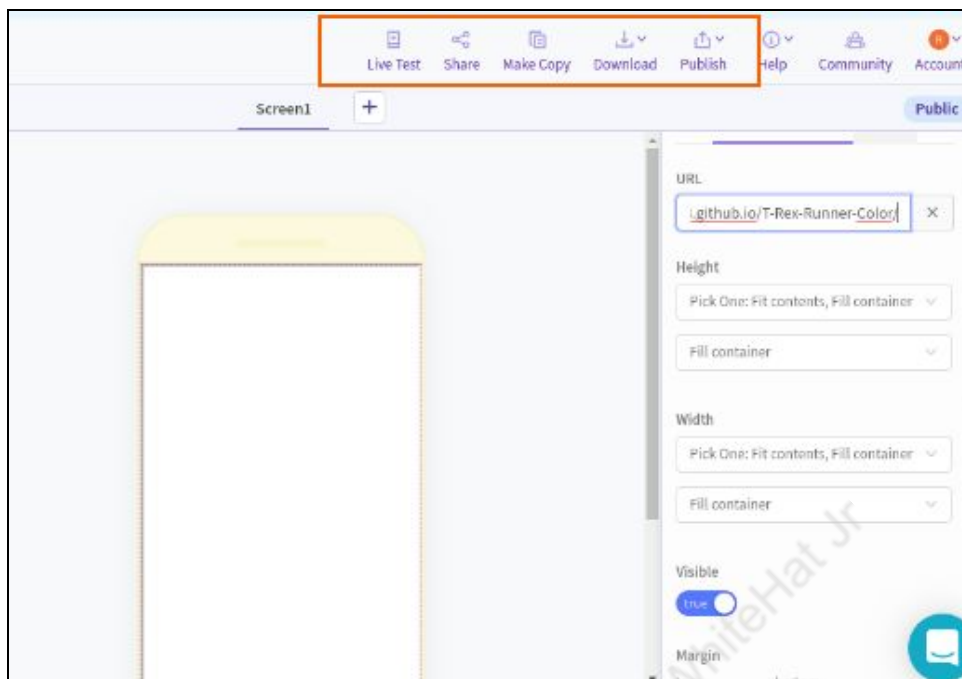

5. Then we locate and add the “web view” component to the screen.

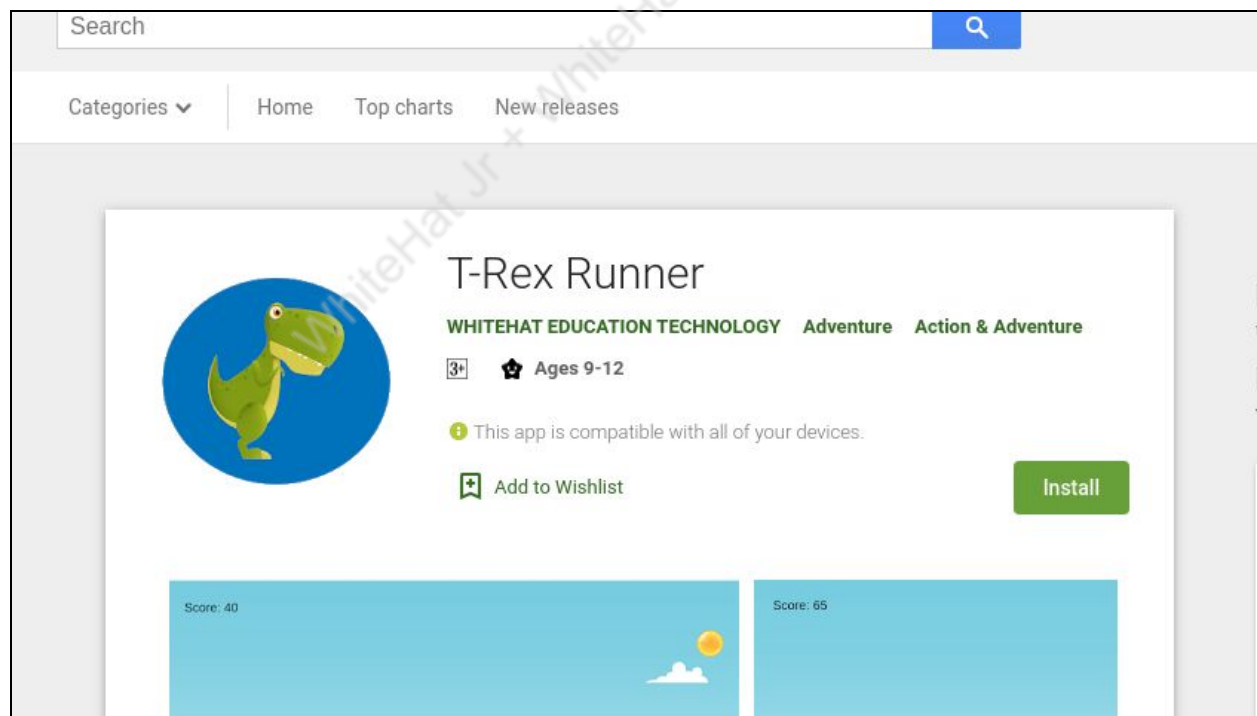

6. We pass the git link in the url part.

7. We can see the live preview on the app. And also download the apk to be installed on ios and android.

8. We can also download the file from the play store.

What's next?

We will learn to create another infinite running game.
